Web (Nginx) Installation on CentOS 9 - Step-by-Step Guide

Step 1: Login as Root User

id -u
If output is 0, you are the root user.

Step 2: Install Nginx

yum install nginx -y
Verify: nginx -v

Step 3: Enable Nginx

systemctl enable nginx
Verify: systemctl is-enabled nginx

Step 4: Start Nginx

systemctl start nginx

Step 5: Verify Service

systemctl status nginx
or
systemctl is-active nginx

Step 6: Verify Default Page

Open: http://<Public-IP>:80

Step 7: Remove Default Content

rm -rf /usr/share/nginx/html/*

Step 8: Download Frontend

curl -L -o /tmp/web.zip https://roboshop-builds.s3.amazonaws.com/web.zip

Step 9: Extract Frontend

cd /usr/share/nginx/html
unzip /tmp/web.zip

Step 10: Verify RoboShop Page

Open: http://<Public-IP>

Step 11: Configure Reverse Proxy

Create:
/etc/nginx/default.d/roboshop.conf

proxy_http_version 1.1;

```
location /images/ {
  expires 5s;
  root /usr/share/nginx/html;
  try_files $uri /images/placeholder.jpg;
}

location /api/catalogue/ { proxy_pass http://<CATALOGUE_SERVER_IP>:8080/; }
location /api/user/      { proxy_pass http://<USER_SERVER_IP>:8080/; }
location /api/cart/      { proxy_pass http://<CART_SERVER_IP>:8080/; }
location /api/shipping/  { proxy_pass http://<SHIPPING_SERVER_IP>:8080/; }
location /api/payment/   { proxy_pass http://<PAYMENT_SERVER_IP>:8080/; }

location /health {
  stub_status on;
  access_log off;
}
```

Replace the placeholders with the actual backend server IP addresses or hostnames.

Step 12: Test Configuration

```
nginx -t
```

Step 13: Restart Nginx

```
systemctl restart nginx
```

Step 14: Verify

```
systemctl status nginx
```

Access http://<Public-IP> and verify the RoboShop application loads successfully.
